Mechanical Structures and Installations

## Typical Wall Junction Box Mounting

Wiring diagram

- Connect with 0/1-10V dimming driver (no use AC OUT)

- Connect with 0/1-10V dimming driver (use AC OUT)

- Connect with 0/1-10V dimming driver (use AC OUT and relay or contactor)

An additional AC relay or contactor is needed when total input current of the load is higher than 1.5A or inrush current is greater than 15A.

Note: We recommend the number of LED drivers connected to $0 / 1-10 \mathrm{~V}$ dimmer does not exceed 20 pieces, The maximum length of the wires from dimmer to LED driver should be no more than 30 meters.

## $0-10 \mathrm{~V}$ or $1-10 \mathrm{~V}$ dimming setting

Select $0-10 \mathrm{~V}$ dimmer or $1-10 \mathrm{~V}$ dimmer according to dimmable LED driver.

## 0-10V Dimmer

## Note:

When the output channel is off,
the output dimming signal is OV or IV .
Please read the dimming section of the dimming driver manual.
If the dimming characteristic curve is the same as right, you must select $1-10 \mathrm{~V}$ dimmer and use AC OUT function, otherwise you can't turn off the lights.

## Match Remote Control (two match ways)

End user can choose the suitable match/delete ways. Two options are offered for selection:

## Use the controller's Match key

Match:
Short press match key, immediately press on/off key (single zone remote) or zone key (multiple zone remote) of the remote.

Delete:
Press and hold match key for 5 s to delete all match, The light blinks 5 times means all matched remotes were deleted.

Dimming input

## Use Power Restart

Match:
Switch off the power, then switch on power again, immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 3 times on the remote. The light blinks 3 times means match is successful.

## Delete:

Switch off the power, then switch on power again, immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 5 times on the remote. The light blinks 5 times means all matched remotes were deleted.
